

OUR ADVANTAGES

- + ENERGY TOWERS can be built everywhere worldwide
- + High power generation through energy production of over 8,000 hours annually
- + Base load capable and therefore independent of tides or weather conditions
- + Uncomplicated and cost-effective maintenance due to proven mechanical engineering technologies
- + Almost independent of existing infrastructure and therefore versatile
- + Can be implemented above and underground
- + Does not pose any ecological risks or Environmental pollution (low CO2 development)
- + No waste products such as B. Hazardous waste
- + No health risks for humans and animals
- + Significant reduction in largely unnecessary power lines

i Further important information can be found on our homepage www.energytowers.de

Always available energy

No need of sun or wind but by using gravity, which is present in every place and with never-ending force.

OUR GOALS

Our business model based on our international patent, completely new, environmentally friendly, highly efficient ENERGY TOWERS technology for the generation of electricity to the point where it is ready for series production and to market it worldwide.

In order to successfully enter the national and international market, a prototype of the ENERGY TOWERS will be built in 2024/2025, which will both demonstrate the practical functionality and form the basis for subsequent series production.

With this goal, ENERGY TOWERS and our team of experts offer a unique solution to the challenges of modern energy supply as well as a significant reduction in the current burdens and risks for people, animals, the environment and nature.

ENERGY TOWERS is characterized by a base-load, clean power supply that is also extremely flexible and scalable.

OUR WORKING PRINCIPLE

ENERGY TOWERS uses the principle of buoyancy, an enormous force that arises when an air-filled body rises in a liquid. This is a never-ending force that is opposite to gravity.

BUOYANCY AND GRAVITY

➔ GRAVITATION

A conveyor device with many buoyancy bodies in a tower filled with a liquid is driven by the buoyancy force. A second conveyor device outside the tower transports the buoyancy bodies back from top to bottom. Using a special process, the buoyancy bodies are then transported back into the tower through a lock. At an impeller of the conveyor system, the energy generated is converted into electricity by a generator.

OUR MILESTONES^{1,2}

ENERGY TOWERS HOLDING AG:

- ✔ Foundation of ENERGY TOWERS Holding AG
- ✔ Off-market listing of company shares (OTC)
- ✔ Preparation of securities information sheet
- ⊖ Listing securities trading banks (AT/CH/DE)
- ⊖ Foundation of ET Schweiz GmbH & ET Patlinz GmbH
- ⊖ Preparation of investment prospectus
- ⊖ Planned initial public offering (IPO)

ENERGY TOWERS GMBH:

- ✔ Foundation of ENERGY TOWERS GmbH
- ✔ Completion of simulation software (KIT)
- ⊖ Capital increase by ETH AG
- ⊖ Application for subsidies
- ⊖ Preparation of specifications (PT)
- ⊖ Commissioning of construction company (PT)
- ⊖ Delivery of construction components (PT)
- ⊖ Completion & commissioning (PT)
- ⊖ Certification of the ENERGY TOWERS
- ⊖ Construction & commissioning (1st SS)
